Age Group	Don't know	No	Yes	Strongly yes
18-24	25%	15%	35%	25%
25-34	20%	10%	40%	30%
35-44	15%	5%	45%	35%
45-54	10%	5%	50%	35%

Figure 1 is a 3D bar chart illustrating the distribution of the number of children per family across three regions: North, Center, and South. The x-axis represents the number of children (0 to 6), and the y-axis represents the number of families (0 to 100). The z-axis represents the regions. The bars are colored in shades of blue and green. The distribution shows that the number of children per family is generally higher in the North and Center regions compared to the South region.

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher than the number of incorrect responses in all cases. The number of correct responses was significantly higher than the number of incorrect responses in all cases. The number of correct responses was significantly higher than the number of incorrect responses in all cases.

Age Group	Percentage
18-24	18%
25-34	22%
35-44	15%
45-54	12%
55-64	10%
65-74	8%
75-84	5%
85+	3%

Figure 1 is a schematic diagram of the experimental setup for the study of the effect of the initial concentration of the polymer solution on the morphology of the polymer film. The diagram shows a cross-section of a polymer film on a substrate, with a coordinate system (x, y, z) and a scale bar. The film thickness is indicated as 100 nm. The substrate is labeled 'Substrate' and the film is labeled 'Polymer film'. The coordinate system has x and y axes in the plane of the film and z axis perpendicular to it. A scale bar is shown at the bottom right.
